

FLOODGATE

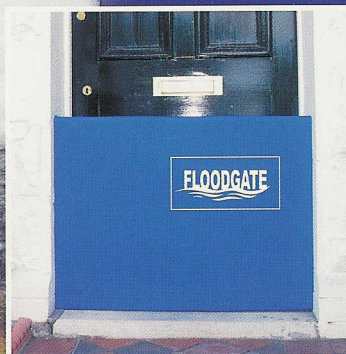

The Unique Flood Protection System

Developed over a period of three years, in conjunction with the University of Wales, Floodgate is easy to install, re-useable and re-siteable providing similar standard flood damage prevention, per entrance, as 50 traditional sandbags. Floodgate is currently supplied to the Environment Agency and councils in England and Wales.

Floodgate benefits include:

- No permanent property fittings needed
- Ease of on-site assembly (one person - two minutes)
- Existing doors can be opened to allow access, without affecting its performance
- Siting whilst flood water is rising
- Extendable, by simple addition of extra units either vertically or horizontally for use on larger openings (eg. garage doors)
- Specific customised units available
- Effective in salt or fresh water situations
